

## Darwin's evolution

2009 | 37' | 16:9

February the 12th, 2009 was the commemoration day of the birth of Charles Darwin. 150 years have been passed since his seminal work's publication *On the origin of species by means of natural selection*. Few men had influenced so much western civilization as Darwin did. His work played a crucial role in shaping the conception of what Nature is, challenging most of the established beliefs about life and about our importance – as human beings – as a species.

From February 12th to May 24th the Calouste Gulbenkian Foundation paid tribute to Charles Darwin, the father of Science and Modern Biology. Thanks to this initiative an exhibition was organized and it worked as a stage for listening, observations, discussions and comprehension about what Darwin and his work concern.

This exposition was the occasion for the projection of thematic videos and interviews of Thiago Carvalho and Filipa Vala directed by Pedro Sena Nunes, Fábio M. Martins e Petar Toskovic, resulting its compilation on the documentary Darwin's Evolution.
